

Key Benefits of CCTV

- Monitoring areas where employee and customer security is at risk (e.g., elevators, parking lots, stairways, basement)
- Monitoring entrances and exits to identify the presence of unauthorized personnel.
- Video recording of situations where violent or suspicious individuals may be present (e.g., hospitals, banks, parking lots, etc.)
- Improving data gathering and extract valuable information through video analytics to monitor footage for undesirable behaviour (e.g., shoplifting) to support marketing, enhance business processes and optimize overall business.

Security & Surveillance System

Proven. Trusted. Recommended.

CCTV

At CSI, we are committed to provide a wide range of video security systems depending on your budget coupled with an unparalleled level of customer service and support. We continue to offer new CCTV technologies as they appear in the market. Our company also offers IP-based cameras, remote monitoring system via LAN, WAN or Internet, fiber optic transmission systems, long range wireless camera systems, speed domes, vandal and bullet-proof cameras. From an expanded selection of IP security cameras and video management systems to full HD displays, traditional surveillance technology, accessories and more, CSI is your **proven, trusted, and highly recommended** video security partner.

Video security and surveillance solutions are in-demand for all types of institutions from shopping centres to transportation terminals, schools, hotels, restaurants and cafes, condominiums, office buildings, manufacturing, and even hospitals. It can be a challenge to install video surveillance in areas that are remote, expensive, or physically impossible to reach with traditional cabling. CSI offers a complete fix with our advanced solutions.

Migration of video surveillance from analog to digital security system (DSS) is more than just a change in technology. It's a complete transformation, opening the door to smarter, more cost-effective, versatile solutions.

- **Visual Clarity:** The quality of surveillance footage captured digitally is far better. It's possible to zero in on details—faces, license plates, handwriting—making it much more effective in detecting and preventing undesirable behaviour.
- **Integration:** Video surveillance systems can now integrate with other devices and applications. It's now possible, for example, to automatically generate text alerts and e-mails. Surveillance video can be viewed on any connected device—tablet, smartphone, laptop/PC.
- **Analytics:** Digital security and surveillance systems no longer need to be monitored by individuals and are no longer just for security. Video analytics software can be used to monitor footage for undesirable behaviour (e.g., shoplifting) and also extract valuable information to support marketing, enhance business processes and optimize overall business
